SUMMARY

Senior RPA Developer with 4+ years of hands-on UiPath experience across federal, local, and enterprise environments using Studio and Orchestrator, designing, developing, testing, and deploying scalable automation solutions, including solutions for the US Coast Guard. Proficient in Python, SQL, REST API integration, Git, and automated testing, with experience delivering systems integrations and production RPA solutions.

TECHNICAL SKILLS

UiPath & Enterprise RPA: UiPath Studio, UiPath Orchestrator (queues, assets, credentials, triggers, logging, monitoring), REFramework, attended and unattended bots, reusable automation components, enterprise RPA design, development, testing, deployment, and debugging

Automation Delivery & Process Engineering: Automation opportunity and feasibility assessment, process discovery, requirements analysis, process mapping, technical design, implementation planning, UAT, hypercare, production support, and automation governance

Systems Integration, Programming & Data: VB.NET, C#, Python, SQL, Bash; LINQ and DataTable manipulation; REST API integration; enterprise systems, databases, APIs, spreadsheets, and web applications; SQL Server, PostgreSQL, Excel automation, AWS, and Docker

Software Engineering & Delivery Practices: Git, GitLab, CI/CD (Jenkins, GitLab CI), unit and integration testing, debugging, code review, performance optimization, backlog refinement, Agile/Scrum, Kanban, Orchestrator monitoring, and technical documentation

EXPERIENCE

OTOT – Senior RPA Consultant (embedded with UiPath/US Coast Guard FINCEN)

Oct 2024 – Present

Fully remote; Sole RPA developer for the United States Coast Guard Finance Center (FINCEN) on a federal engagement

- Own the full RPA lifecycle as sole developer, performing process discovery, requirements analysis, PDD authoring, development, testing, UAT, deployment, and hypercare for mission-critical automation under USCG security and enterprise deployment requirements.
- Design, develop, and maintain production-ready UiPath automations for 12 legacy-system processes, replacing manual operator workflows across enterprise applications without APIs and reducing manual processing by ~18 hours per week per bot.
- Develop UiPath Document Understanding workflows for document ingestion, classification, extraction, and validation, eliminating 24 hours of manual review per week across 4 operational units while updating/tracking projects in Jira and USCG's SharePoint.
- Establish development standards, REFramework patterns, reusable components, exception handling, and automation governance for the production bot fleet maintained in GitLab, improving maintainability and significantly reducing recurring support incidents.
- Design and optimize UiPath Orchestrator queues, triggers, logging, monitoring, and retry strategies, enabling unattended automations to recover from transient failures and improving production reliability communicating with stakeholders directly via Microsoft Teams.

Sarasota County Government – Automation Developer (CJIS verified)

Dec 2023 – Oct 2024

Hybrid; UiPath architect who stood up the county's RPA practice

- Built the county's RPA Center of Excellence as sole architect, establishing automation intake, development standards, reusable frameworks, governance, and repeatable deployment pathways from the ground up.
- Delivered UiPath automations end to end, translating stakeholder requirements into process design documents (PDDs), solution design documents (SDDs), technical designs, testing, and production deployment.
- Built proactive monitoring and incident-response tooling that caught failures before user impact and improved system reliability.
- Introduced Git-based pull request reviews, Kanban backlog management, unit testing, and development best practices, improving configuration control, code quality, and continuous improvement across the automation practice.

Cardinal Financial – Software Engineer II / Automation Developer

Jul 2019 – Aug 2023

Fully remote; Python automation and a cloud-native data warehouse

- Developed configurable Python and SQL automation for enterprise data workloads on AWS using Step Functions, ECS, Lambda, and PostgreSQL, supporting scalable systems integration and workflow automation with Jenkins.
- Designed and integrated REST APIs with Flask and implemented pytest and Jenkins CI/CD pipelines, providing automated testing, version control, and deployment validation for every production merge with GitHub.
- Built proactive monitoring, troubleshooting, and incident-response capabilities that identified failures before user impact, maintained uptime SLAs, and improved operational reliability and sustainment.

UPC Insurance – Application Support/RPA Team Lead

Sep 2017 – Jul 2019

- Drove a new RPA initiative from evaluation through production: self-trained on UiPath, built 8 attended and unattended workflows, and eliminated 20 hours per week of manual application support and data-processing work; migrated company phone system using RPA.

CERTIFICATIONS & EDUCATION

UiPath Certified Advanced RPA Developer (2019) • UiPath Certified RPA Associate (2024) • Python Institute: PCAP (2022), PCED (2024)

B.S., Information Sciences and Technology – The Pennsylvania State University • Dean's List, 3.92 GPA
